Abstracts

A weighted safety scalpel is a specialized surgical instrument designed with an integrated counterweight system to enhance stability and control during precision cutting procedures, typically featuring a retractable or shielded blade mechanism that reduces the risk of accidental injuries such as needlestick or sharps injuries to healthcare providers; this ergonomic design minimizes hand fatigue, improves maneuverability in delicate surgeries (e.g., ophthalmology, neurosurgery, or plastic surgery), and aligns with occupational safety standards by incorporating passive or active safety features that automatically cover or retract the blade after use.
