## Abstracts

Welded Metal Bellow are manufactured by welding a number of individually formed diaphragms to each other. The comparison between the two bellows types generally centers on cost and performance. Hydro formed bellows generally have a high tooling cost, but, when mass-produced, may have a lower piece price. However, hydro formed bellows have lower performance characteristics due to relatively thick walls and high stiffness. Welded metal bellows are produced with a lower initial tooling cost and maintain higher performance characteristics. The drawback of welded bellows is the reduced metal strength at weld joints, caused by the high temperature of welding. North America is the largest market with about 30% market share. Europe and China are follower, accounting for about 43% market share. The key players are KSM USA, BOA Group, Technetics, AESSEAL, Senior Aerospace Metal Bellows, Metalflex, Duraflex, MIRAPRO, Flex-A-Seal, Hyspan, Weldmac, Bellows Tech etc. Top 3 companies occupied about 20% market share.

The global Welded Metal Bellow market size was estimated at USD 386.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
