Abstracts

Welded reinforcing mesh is a prefabricated steel reinforcement product consisting of high-tensile or mild steel wires arranged in a grid pattern and welded at all intersections to form a rigid, flat sheet. It is primarily used in concrete construction to provide structural reinforcement, improve tensile strength, and control cracking in applications such as slabs, walls, pavements, and precast elements. The mesh is manufactured in standard sheet sizes and grid spacings, offering consistent quality, faster installation, and reduced labor costs compared to manually tied rebar. Its design ensures uniform distribution of loads and enhances the durability and performance of concrete structures.

The global Welded Reinforcing Mesh market size was estimated at USD 2950.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
