Abstracts

Welded bent chain is a special type of chain that is mainly used in certain mechanical or transportation systems, especially in environments that require strong load-bearing capacity or special structural support. It is made up of multiple metal bent plates (usually steel plates) connected by welding, and has good wear resistance and load-bearing capacity. Due to its unique design, this chain can withstand large loads and is widely used in industrial and mechanical equipment. Welded bent plate chains are designed for wood processing environments with strong impacts, material wear, and high levels of dust. They can withstand high load impacts and have long-lasting wear resistance, thereby extending their service life.

The global Welding Bent Plate Chain market size was estimated at USD 834.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
