Abstracts

Welding Curtains, Blankets, and Screens are protective barriers essential for safety in hot work environments, collectively designed to mitigate the multiple hazards of welding, cutting, and grinding. Welding Curtains (or Drapes) are flexible panels, often made from UV-filtering materials like fire-resistant PVC or vinyl, primarily intended to be hung vertically to isolate a welding area, block the harmful UV radiation and arc light from affecting nearby personnel, and contain sparks. Welding Screens typically refer to the full, portable framework systems that hold a curtain or panel, creating a self-standing, movable partition to define and enclose the workspace safely. In contrast, Welding Blankets are heavy, non-flexible sheets made from high-temperature materials (such as silica or fiberglass) designed to be used horizontally, specifically for draping over equipment or laying on floors and vulnerable surfaces to protect them directly from falling molten metal, hot slag, and intense heat, thereby preventing fire and property damage.

The global Welding Curtains, Blankets and Screens market size was estimated at USD 900.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
