Abstracts

Welding fume extraction systems are localized purification devices used to capture, filter, and remove metal fumes, particulate matter, odors, and gaseous pollutants generated during welding. Their core function is to rapidly capture welding source pollutants before they diffuse using a high-negative-pressure fan and multi-stage filtration modules (typically including a pre-filter, HEPA filter, and activated carbon layer), ensuring operator safety, maintaining air quality in industrial workshops, and meeting occupational health regulations. These systems are available in mobile, fixed ducted, integrated welding torch, and workstation-integrated configurations, with airflow typically ranging from 800 to 4,000 m³/h. With the increasing prevalence of automated welding, these systems are increasingly equipped with intelligent airflow adjustment, filter life monitoring, and network diagnostics. These systems are widely used in automotive manufacturing, robotic welding lines, metal processing, shipbuilding, aerospace, and educational workshops, and have become a fundamental piece of equipment in industrial environmental safety systems.

The global Welding Fume Extraction Systems market size was estimated at USD 918.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
