## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Welding Multi-stage Centrifugal Blower competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of welded multi-stage centrifugal blowers reached 278,430 units, with an average selling price of \$1,175 per unit. Welded multi-stage centrifugal blowers utilize multiple centrifugal compression stages welded together to form a single, integrated blower structure. These blowers are used for high-pressure or high-lift gas transport applications. Compared to single-stage or segmented centrifugal blowers, welded multi-stage blowers emphasize the welded connection between the impellers and their surroundings within the unit, typically aiming to improve strength, sealing, and integrity.

The global Welding Multi-stage Centrifugal Blower market size was estimated at USD 327.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
