Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Welding Process Monitoring System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global welding process monitoring system production reached approximately \$34,000 units, with an average global market price of around US\$ \$30,000 per unit. A welding process monitoring system is an intelligent system used for real-time monitoring, control, and optimization of industrial welding processes. By integrating multiple sensors, data acquisition modules, and specialized software algorithms, it continuously monitors and analyzes key parameters during the welding process. This system aims to identify welding defects in real time, optimize welding process parameters, ensure consistent welding quality, and enable traceability of production data, ultimately improving production efficiency, reducing scrap rates, and overall costs. The welding process monitoring system industry chain encompasses a complete chain, from the upstream supply of raw materials and core components (including sensor chips (such as CMOS/CCD image sensors), optical lenses, lasers, embedded hardware, and software algorithms (such as AI defect recognition)) to midstream system integration and manufacturing (where various manufacturers integrate hardware and software to develop complete monitoring systems), and then to downstream applications and services (widely used in automotive, aerospace, electronics and electrical (especially PCB welding), heavy machinery, and other fields, with services including system integration, installation and commissioning, and after-sales maintenance).

The global Welding Process Monitoring System market size was estimated at USD 1032.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.30% during the forecast period.
