Abstracts

Welding smoke dust removal equipment is an industrial equipment specially used to remove harmful smoke during welding. During welding operations, the high temperature generated at the welding point will cause the metal to interact with the arc, releasing a large amount of harmful smoke and gas, which poses a threat to the health of operators and may even cause occupational diseases. Welding smoke dust removal equipment uses efficient filtration systems such as bag filters, electrostatic dust removal, activated carbon adsorption and other technologies to capture and remove harmful substances in welding smoke, ensuring the air quality of the workshop, protecting the health of workers, and avoiding welding smoke from polluting the surrounding environment. This equipment is widely used in smoke control in welding, cutting, grinding and other processes, especially in heavy industry, automobile manufacturing, metal processing and other industries, playing a vital role in environmental protection.

The global Welding Smoke Dust Removal Equipment market size was estimated at USD 283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
