Abstracts

Wet chemical extinguishers are a specialized class of fire suppression equipment designed primarily for Class K (kitchen) fires involving cooking oils and fats, utilizing a saponification process where an alkaline agent reacts with hot oils to form a soapy foam layer that cools the fuel and seals it from oxygen. These extinguishers are distinct from water, foam, dry powder, or CO₂ types due to their targeted chemical formulation, which not only extinguishes flames but also prevents re-ignition—a critical feature in commercial kitchens, food processing facilities, and other environments where high-temperature grease fires are a risk. Their operation involves deploying a fine mist or stream of wet chemical agent under pressure, and they are subject to strict performance and safety standards, such as those from UL, EN, and other regulatory bodies, ensuring effectiveness and compatibility with automatic suppression systems often integrated into commercial cooking exhaust hoods.

The global Wet Chemical Extinguishers market size was estimated at USD 210.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
