Abstracts

Wet electrostatic precipitator (WESP) is a highly efficient purification technology that uses high-voltage static electricity to charge dust particles in flue gas and then uses a sprayed water film to capture and adsorb particulate matter and gaseous pollutants (such as SO₂ and acid mist). Its market significance lies in achieving ultra-low industrial flue gas emissions (dust < 5mg/m³), addressing the problem of secondary particulate matter after wet desulfurization, and providing end-of-pipe treatment solutions for coal-fired power plants, steel, chemical industries, and other industries. This technology meets stringent global environmental regulations and promotes a green and low-carbon transition.

The global Wet Electrostatic Precipitator Solutions market size was estimated at USD 2978.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
