Abstracts

Wet Grid Type Ball Mill is a grinding machine widely used in mineral processing for reducing the size of ores and other materials by using a rotating cylindrical drum filled with grinding media and a water-based slurry. Unlike overflow ball mills, this type features a grid plate at the discharge end, which allows for the efficient separation and removal of finished materials while retaining coarser particles for further grinding. The grid design helps prevent over-grinding, enhances productivity, and allows for better control of particle size distribution. It is commonly employed in mining, cement, and chemical industries where precise and efficient grinding is essential.

The global Wet Grid Type Ball Mills market size was estimated at USD 237.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
