Abstracts

A wet membrane humidifier, also known as an evaporative humidifier, is a device that increases indoor humidity levels by drawing dry air through a water-saturated membrane or wick, where natural evaporation adds moisture to the air before it is circulated back into the room; this method is energy-efficient, avoids issues like white dust or mineral dispersion associated with ultrasonic models, and is often favored in residential and light commercial settings for its ability to maintain a balanced, comfortable humidity without over-saturation.

The global Wet Membrane Humidifier market size was estimated at USD 4250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
