Report Overview

Wet floor heating is the most mature installation technology of water-heated floor heating. It is relatively cheap and is the leading technology in the domestic floor heating market. The so-called wet type refers to covering the floor heating pipes with concrete, and then laying ground, ceramic tiles and other floor materials on top of the concrete layer. This layer of concrete not only protects and fixes the plumbing pipes, but is also the main channel for transferring heat. The concrete layer distributes heat evenly, reducing localized overheating or cooling.
