## Abstracts

A wheel hub assembly bearing is a crucial part of the wheel assembly that connects the wheel and the axle. It is a set of steel balls (ball bearings) or tapers (tapered bearings), held together by a metal ring. It enables the wheel to rotate smoothly with a minimum of friction. One side of the bearing rotates with the wheel while the other side is fixed to the suspension. The rolling elements in bearings carry vehicle load and ensure minimal-friction rotation between the inner and outer races. The market outlook for hub bearing assemblies is positive. As the automotive industry continues to evolve, there is an increasing demand for hub bearing assemblies, especially with the rise of electric and smart vehicles. Additionally, the growing global economy is boosting car sales, which in turn drives the market for hub bearing assemblies. Furthermore, advancements in technology are continuously improving the performance and durability of hub bearing assemblies, further fueling market growth. Overall, the market outlook for hub bearing assemblies is optimistic.

The global Wheel Hub Assembly Bearing market size was estimated at USD 7403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
