Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on White Aluminum Oxide Blast Media competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. White Aluminum Oxide Blast Media is a high-purity abrasive material produced by fusing high-grade alumina (Al_2O_3) in an electric arc furnace at temperatures above 2000 °C and then cooling, crushing, and sieving it into uniform grit sizes. It features exceptional hardness (Mohs 9), chemical inertness, and sharp angular grains, making it ideal for precision surface preparation, deburring, etching, and coating removal in aerospace, semiconductor, and medical device industries. The supply chain begins with bauxite ore mining and calcination to produce metallurgical alumina, followed by refining and electro-fusion to generate white fused alumina. Midstream processes include crushing, magnetic separation, classification, and particle sizing by specialized abrasives producers. Downstream, the material is distributed through industrial suppliers and integrated into blasting systems, grinding wheels, and lapping compounds used by manufacturers and maintenance contractors worldwide. In 2024, global production of White Aluminum Oxide Blast Media reached about 720,000 tons with a capacity of 880,000 tons. Prices ranged from USD 980-2,600 per ton, depending on grit size, purity, and morphology, while the gross margin averaged 25%.

The global White Aluminum Oxide Blast Media market size was estimated at USD 1068.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
