Abstracts

White box network hardware refers to unbranded, commodity networking devices?such as switches, routers, and network interface cards?that are built using standardized, off-the-shelf components and are decoupled from proprietary software, allowing buyers to run their own operating systems (e.g., open-source solutions like Cumulus Linux, SONiC, or OpenSwitch) and manage hardware independently of traditional vendor lock-in. This approach emphasizes flexibility, cost efficiency, and customization, making it particularly appealing to large-scale data center operators, cloud service providers, and enterprises seeking to optimize network performance and reduce capital expenditures by leveraging disaggregated hardware and software models.

The global White Box Network Hardware market size was estimated at USD 10500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
