Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wide-Bore CT Systems competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production will be approximately 780 units, with an average selling price of US\$1.14 million per unit. Wide-bore CT systems are a type of computed tomography (CT) scanner with an enlarged gantry aperture (typically >80 cm). They are designed to meet the needs of patients with unusual body shapes, radiotherapy positioning, and high-precision imaging. Compared to traditional CT systems (aperture approximately 70 cm), wide-bore CT systems offer a larger scanning volume, allowing patients to be examined in a more comfortable position. They are particularly suitable for obese patients, those undergoing specialized body positioning, and for tumor positioning during radiotherapy. As a key piece of equipment in the high-end medical imaging field, wide-bore CT systems are forming a multi-tiered market structure, ranging from entry-level to mid-range and high-end models. Equipment technology continues to evolve, moving toward larger apertures, higher detection performance, and intelligence. High-end models incorporate advanced technologies such as dual-source CT, spectral imaging, and AI reconstruction. In the global market, mid-range devices dominate overall demand, while high-end configurations are used by leading institutions for scientific research and precision medicine. Regional development is showing differentiated trends: developed regions are focusing on high-end upgrades, while emerging markets are promoting the rapid popularization of mainstream and mid- and low-end products through public procurement. The overall market continues to expand, driven by both medical upgrades and technological innovation.

The global Wide-Bore CT Systems market size was estimated at USD 890.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
