## Abstracts

A wide caliber feeding bottle, also known as a wide-neck or wide-mouth feeding bottle, is a type of baby bottle specifically designed with a broader opening and nipple base to closely mimic the shape and feel of a mother's breast. This design facilitates easier latching for babies, making it particularly beneficial for breastfed infants transitioning to bottle feeding. The wider opening also allows for easier cleaning, filling, and mixing of formula or breast milk, reducing the chances of spills and improving hygiene. Wide caliber feeding bottles are often made from BPA-free materials and come with anti-colic venting systems to minimize air intake, which helps prevent gas, spit-up, and discomfort. Their ergonomic design and practical features make them a popular choice among parents seeking a natural and convenient feeding experience for their babies.

The global Wide Caliber Feeding Bottle market size was estimated at USD 748.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
