Abstracts

Wide photovoltaic glass refers to specialized glass panels with a width exceeding standard dimensions, typically greater than 1.3 meters, designed for integration into solar modules to enhance light transmittance, durability, and energy efficiency. These panels often feature anti-reflective coatings, tempered surfaces, and low-iron compositions to maximize sunlight absorption while withstanding environmental stressors such as hail, wind, and temperature fluctuations. As a critical component in both utility-scale solar farms and building-integrated photovoltaics (BIPV), wide photovoltaic glass enables larger, more efficient module designs, reduces installation costs by minimizing framing and interconnections, and supports the trend toward high-power, dual-glass modules that offer improved longevity and performance in diverse climatic conditions.

The global Wide Photovoltaic Glass market size was estimated at USD 10250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
