Abstracts

Treatment of Wilson's Disease focuses on reducing copper accumulation in the body to prevent or reverse organ damage. The primary approaches include the use of copper-chelating agents such as penicillamine and trientine, which bind excess copper and promote its excretion through urine. Additionally, zinc therapy is used to block copper absorption from the intestine, serving mainly as maintenance therapy or for patients intolerant to chelators. In severe cases with advanced liver damage, liver transplantation may be necessary. Emerging treatments like gene therapy and RNA interference (RNAi) are under research to offer more targeted and potentially curative options. The Wilson's Disease treatment market is driven by advancements in diagnostic technologies that enable earlier detection and intervention, improving patient outcomes significantly. Increasing awareness of the disease and its treatability among healthcare professionals and patients has led to higher diagnosis rates and demand for effective therapies. Additionally, the development of novel treatment options such as gene therapy and RNA interference (RNAi) is creating new growth opportunities by offering potential for more targeted, safer, and long-term solutions compared to traditional chelating agents and zinc therapy. However, the market faces challenges including the rarity of Wilson's Disease, which limits the patient population and reduces incentives for extensive research and development. Existing treatments often have side effects and require lifelong adherence, impacting patient compliance and quality of life. High costs associated with emerging therapies and the complexities of clinical trials for rare diseases add further barriers. Moreover, uneven access to diagnostic and treatment facilities globally results in delayed diagnosis and suboptimal disease management, particularly in low- and middle-income regions.

The global Wilson's Disease Treatment market size was estimated at USD 230.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10%

during the forecast period.
