Report Overview

Operation and maintenance (O&M) costs constitute a sizeable share of the total annual costs of a wind turbine. For a new turbine, O&M costs may easily make up 20-25 per cent of the total levelised cost per kWh produced over the lifetime of the turbine. If the turbine is fairly new, the share may only be 10-15 per cent, but this may increase to at least 20-35 per cent by the end of the turbine's lifetime. As a result, O&M costs are attracting greater attention, as manufacturers attempt to lower these costs significantly by developing new turbine designs that require fewer regular service visits and less turbine downtime.

The global Wind Farm Operation and Maintenance market size was estimated at USD 11590 million in 2023 and is projected to reach USD 33993.72 million by 2032, exhibiting a CAGR of 12.70% during the forecast period.

North America Wind Farm Operation and Maintenance market size was estimated at USD 3713.31 million in 2023, at a CAGR of 10.89% during the forecast period of 2024 through 2032.
