A wind gauge, also known as an anemometer, is a device used to measure the speed and direction of wind. It typically consists of a set of cups or vanes that rotate when exposed to wind. The rotation of the cups or vanes is then converted into an electrical signal, which can be used to determine the wind speed. Some advanced wind gauges also include additional sensors to measure other parameters such as temperature, humidity, and barometric pressure. Wind gauges are commonly used in meteorology, aviation, and environmental monitoring to gather data on wind conditions.
