A wind measurer, also known as an anemometer, is a device used to measure the speed and direction of wind. It typically consists of a set of cups or propellers that rotate when exposed to wind, and the rotation is converted into an electrical signal that can be measured. The speed of rotation is directly proportional to the wind speed, allowing for accurate measurement. Some advanced anemometers also include additional sensors to measure other parameters such as temperature and humidity. Wind measurers are commonly used in meteorology, aviation, and environmental monitoring.
