## Abstracts

The wind power generation pitch system is one of the core control systems of wind turbines (WTGs). It is mainly used to adjust the blade angle (pitch angle) to optimize wind energy capture, ensure the safety of the unit, and adapt to different wind speed conditions.

**Market Drivers**  
**Growing Demand for Renewable Energy:** Global demand for clean energy continues to rise. Wind power generation is an important source, and wind power generation variable pitch system is a core component, and market demand has grown accordingly. China's "14th Five-Year Plan" clearly defines the wind power installed capacity target. In 2030, the total installed capacity of wind power and solar power will exceed 1.2 billion kilowatts. Policies promote industry expansion.

**Technological Progress and Innovation:** Intelligent technology (such as AI algorithm optimization control) improves the efficiency of the variable pitch system, and lightweight materials (such as carbon fiber composite materials) reduce weight and improve performance. Application of digital twin technology, such as Goldwind Technology optimizes power generation efficiency by 8%-12% through real-time simulation.

**Policy Support and Subsidy:** Local governments have introduced offshore wind power subsidy policies. Guangdong, Zhejiang and other places have issued specific plans to support project construction. EU carbon tariff policy promotes technology iteration, and the penetration rate of smart wind power generation variable pitch system will exceed 60% in 2025.

**Cost reduction and cost-effectiveness improvement:** Large-scale production and standardized construction reduce the cost of variable pitch system and improve competitiveness. Chinese companies such as Goldwind Technology reduce supply chain dependence and ensure cost stability through vertical integration.

The global Wind Power Generation Pitch System market size was estimated at USD 2415.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 7.50% during the forecast period.
