Report Overview:

The erosion and corrosion of wind towers and blades is not a surprise given the variety of and often harsh environmental conditions encountered at sea and on land. If not protected, this erosion and corrosion will reduce the structure's strength, reliability, life span and, ultimately, its economic value. So coating plays an important role in protecting blades, tower and other components from environment.

Both onshore and offshore wind turbines need coatings to ensure their optimum performance for their service life with the minimum of maintenance. Wind turbine coatings are applied to components including blades, towers, nacelles, foundations, and equipment. Like any coating the environmental conditions, service life, required durability, use, and substrate all need to be carefully chosen for to ensure the best outcome and performance.
