Abstracts

Wind power pultruded glass fibre plates are composite plates made specifically for use in wind turbine blades through the pultrusion process. Its main reinforcing material is glass fibre. Pultrusion is a manufacturing method for composite materials. For wind power pultruded glass fibre plates, it starts with continuous glass fibres. These fibres are drawn through a resin-impregnation system. The resin, which can be epoxy resin, polyester resin, or vinyl - ester resin, coats and saturates the fibres. The resin - impregnated glass fibres then pass through a heated die that has a specific cross-sectional shape designed for the wind power application.

The global Wind Power Pultruded Fiberglass Plates market size was estimated at USD 1091.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
