Abstracts

Wind power sandwich material refers to a composite structural panel, typically composed of two outer skins (often made from fiberglass, carbon fiber, or metal) bonded to a lightweight core material (such as foam, balsa wood, or honeycomb), designed specifically for use in the construction of wind turbine blades. These materials are engineered to provide a high strength-to-weight ratio, fatigue resistance, and structural integrity while minimizing overall blade mass, which is critical for optimizing aerodynamic efficiency, reducing load on turbine components, and enhancing energy capture in varying wind conditions.

The global Wind Power Sandwich Material market size was estimated at USD 6200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
