Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wind Power Torque Protection Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Wind Power Torque Protection Device is a mechanical safety component designed to protect a wind turbine's drivetrain—particularly the gearbox, generator, and shafts—from damage caused by sudden torque spikes or overloads. These spikes can result from gusts, grid faults, or emergency stops. The device, often in the form of a torque limiter, safety coupling, or overload clutch, automatically disengages or slips when torque exceeds a preset threshold, absorbing or isolating excess energy. By preventing mechanical stress and failure, it enhances system reliability, extends component life, and minimizes costly maintenance downtime in wind power operations. The product sells about 40,000 units a year, each costing about \$10,000. The upstream industry for wind power torque protection devices primarily involves raw materials such as high-strength steel, specialty alloys, friction materials, and precision springs, as well as machining, casting, and heat treatment processes provided by metal fabricators, component manufacturers, and industrial equipment suppliers. The downstream industry includes wind turbine OEMs and drivetrain integrators who incorporate torque protection devices into gearboxes, couplings, or shaft assemblies, as well as wind farm developers, operators, and maintenance service providers who rely on these devices to ensure reliability, reduce downtime, and extend turbine life. The gross profit margin for wind power torque protection devices ranges from 35% to 40%.

The global Wind Power Torque Protection Device market size was estimated at USD 396.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 4.30% during the forecast period.
