### Report Overview

Turbine control systems are seen as an important contributor to lowering the cost of energy, a drive that has been gaining momentum as subsidies are rolled back and higher-cost offshore wind develops. Reducing the cost of energy is partially a function of maximizing power production (and revenue) over the lifetime of a turbine, something that turbine control systems can do by altering the pitch of the blade and maximizing wind capture. It also involves balancing performance with technology investments and other production costs, including the wear and tear on the turbine.
