Abstracts

Wind Turbine Decommissioning Service refers to a series of professional services provided to safely and efficiently dismantle, remove, and dispose of wind turbines that have reached the end of their service life or are being decommissioned for other reasons. This service typically includes the following steps: first, isolating and disconnecting the electrical systems of the wind turbines to ensure safety. Then, the mechanical components are dismantled, such as the blades, nacelle, and tower. Heavy - lifting equipment is used to lift and remove these components from the tower and transport them to designated locations for further processing. The service also involves the removal of the foundation of the wind turbine and the restoration of the site to its original or a suitable state, minimizing the impact on the environment. In addition, proper disposal or recycling of the decommissioned components is an important part of the service, in accordance with relevant environmental regulations and industry standards, to avoid resource waste and environmental pollution.
