## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wind Turbine Hub Base Frame competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Wind Turbine Hub Base Frame will reach 1.6417 million tons, with an average selling price of US\$1,785.31 per ton. Gross profit margin is 5.8%-25%, and single-line production capacity is 50,000 tons. Raw materials account for 52.92%. In a wind turbine, the hub is connected to the nacelle base via the main shaft. The hub base is the connecting structure or support between the hub and nacelle base. Its design must ensure stable hub fixation and effectively transfer loads to the nacelle base, ultimately supported by the tower. The hub base frame secures the blades or blade assembly to the rotating shaft. It is a critical component connecting the blades to the generator shaft and withstands the thrust, shear, torque, variable torque, and gyroscopic torque exerted by the wind on the blades. The hub base frame's function is to transfer the wind forces and torque acting on the blades to the generator, thereby transferring the loads on the blades to the base or tower. Large-megawatt hub base frame production capacity is tight, and a global supply gap is expected over the next five years. Large-megawatt hub and base frame production places higher demands on furnace size, plant/pit dimensions, vehicle load capacity, and machining equipment. Existing small-megawatt supporting capacity cannot meet the demands for efficient production. Casting expansion faces constraints such as tight production targets, high capital expenditures, long construction cycles, and technical difficulties. Existing or under-construction capacity is limited, and companies are primarily concentrated in China.

The global Wind Turbine Hub Base Frame market size was estimated at USD 2931.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.00% during the forecast period.
