## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wind Turbine Nacelle Base Frame competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Wind Turbine Nacelle Base Frame production reached 230,900 tons, with an average selling price of US\$1,604.88 per ton. The cost was US\$1,319.67 per ton, with a gross profit margin of approximately 17.77%. The nacelle base frame is the foundation of the wind turbine and the primary component that supports and protects the motor and components within the wind turbine. All the wind turbine's major systems and components are mounted on it. Therefore, the nacelle base frame must possess sufficient mechanical strength and rigidity, be lightweight, and provide adequate vibration resistance. Wind Turbine Nacelle Base Frame are commonly constructed using cast or welded structures. As turbine capacity and size increase, nacelle chassis designs are often constructed by splicing together separate components to improve processability. According to the "National Economic Industry Classification" (GB/T4754-2017), nacelle baseplates fall under the "C33 Metal Products Industry" category.

The global Wind Turbine Nacelle Base Frame market size was estimated at USD 371.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
