Abstracts

Window automation is used predominately for the purpose of natural ventilation and smoke ventilation and opening hard to reach windows. The extraction of smoke and heat build up in any building can often be a difficult task to overcome. However, the inclusion of window automation systems can provide a simple ventilation system that meets with Building Regulations. By fitting a window with a mechanical actuator linked to a smoke and heat detecting system, the window will open and close automatically when smoke or excess heat are detected, returning the building to tenable conditions for its occupants.

The global Window Automation market size was estimated at USD 5104.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
