Abstracts

Window film for vehicles refers to thin laminated sheets or coatings applied to automotive glass surfaces, designed to provide functional benefits such as heat rejection, UV radiation protection, glare reduction, enhanced privacy, and shatter resistance in the event of impact. These films are typically constructed from polyester layers with adhesives and specialized coatings, including dyed, metallized, carbon, or ceramic-infused variants, each offering distinct performance characteristics in terms of thermal insulation, optical clarity, and signal transmission compatibility. The product category encompasses both aftermarket installations and factory-fitted solutions, adhering to regional regulatory standards that dictate permissible levels of visible light transmission (VLT) to ensure driver visibility and safety.
