## Abstracts

Wine yeast nutrients are substances that provide yeast with necessary nutrients during the fermentation process, ensuring that it can convert sugar into alcohol and carbon dioxide in a healthy and active manner, while promoting the formation of wine flavor and quality. They mainly include nitrogen sources (such as amino acids and diaminophosphates), vitamins (such as vitamin B1), minerals (such as zinc and magnesium), lipids, and yeast autolysates. These nutrients can enhance yeast vitality, prevent fermentation stagnation, and help optimize fermentation conditions and the sensory characteristics of the final product.
