## Abstracts

Wing pulleys for conveyor belts are specialized pulleys featuring wing-like protrusions on their surface, designed to effectively remove residual material adhering to the belt, preventing misalignment and wear. Typically constructed from high-strength steel or cast iron with hardened surfaces for enhanced durability, these pulleys utilize their unique wing design to improve self-cleaning capabilities, reduce material buildup, and minimize belt slippage, thereby extending the service life of both the belt and pulley. Wing pulleys are widely used in conveyor systems across industries such as mining, ports, and chemical processing, particularly excelling in environments with wet, sticky materials or high dust levels. They are commonly installed at the head or tail of conveyors, serving as drive or return pulleys, and are critical components for ensuring smooth belt operation.

The global Wing Pulleys for Conveyor Belt market size was estimated at USD 1171.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
