Report Overview

The wiper motor is driven by the motor, and the rotary motion of the motor is converted into the reciprocating motion of the wiper arm through the linkage mechanism, so as to realize the wiper action. Generally, the wiper can be operated by turning on the motor. It can be changed by selecting high-speed and low-speed gears. The current of the motor controls the speed of the motor and then the speed of the wiper arm. Unlike the wiper blade market with a high replacement rate, the wiper motor replacement rate is not high. This article counts the wiper motor assembly market (that is, only the front-mounted wiper motor is counted, and the rear-mounted wiper motor is not included).
