Report Overview:

Electric spark wire cutting machine belongs to the category of electric machining. Its basic working principle is to use continuous moving thin metal wires (called electrode wires) as electrodes to perform pulse spark discharge on the workpiece to remove metal and cut and shape. EDM technology is a kind of special processing. It is different from traditional processing technology that requires mechanical force and mechanical energy to cut off. It mainly uses electric energy to realize the processing of materials. Therefore, EDM technology is not limited by material properties, and can process any hardness, strength, and brittle materials, which plays an important role in the current stage of machining.
