### Report Overview

Wire and cable insulation and jacketing materials are specialized polymers, rubbers, and compounds used to protect electrical conductors and cable assemblies. Insulation is the inner dielectric layer applied directly to the conductor to prevent current leakage, short circuits, and ensure electrical safety. Jacketing is the outer protective sheath that defends the cable against mechanical stress, moisture, flame, chemicals, and environmental hazards. These materials not only safeguard electrical performance but also extend cable lifespan, enhance durability, and ensure compliance with safety and industry standards. With the rising demand for high-performance cabling in energy, telecom, automotive, and industrial sectors, insulation and jacketing materials are becoming increasingly critical for modern infrastructure and technology.
