Abstracts

Wire pulling lubricant is a specialized compound designed to reduce friction and tension during the installation of electrical wires, cables, or fiber optics through conduits, raceways, or other enclosed pathways by creating a slippery film on the cable jacket and inner conduit surface, thereby minimizing the risk of damage, abrasion, or excessive pulling force that could compromise the integrity or performance of the cable. These lubricants are typically formulated from water-soluble, biodegradable, or synthetic materials to ensure compatibility with various cable types and environmental regulations, and they may possess additional properties such as corrosion inhibition, non-conductivity, and resistance to washout in wet conditions to support efficient and safe installation practices across electrical, telecommunications, and data infrastructure projects.
