Abstracts

Compared to inductors with ceramic cores, ferrite wire-wound inductors offer several advantages. They can achieve higher inductance values, handle better saturate currents, and have lower DC resistance. However, it's worth noting that the working frequency range of ferrite wire-wound inductors is typically lower than that of inductors with ceramic cores. As a result, designers often prefer to use ferrite wire-wound inductors in power lines, such as DC-DC converters or power applications.

The global Wire Wound Ferrite Chip Inductor market size was estimated at USD 54.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
