These devices are specialized sensors designed to detect the presence of water in areas where it should not be, such as near appliances, under sinks, in basements, or around HVAC systems, using wired connections to transmit alerts to a central control panel or monitoring system. They operate by employing either probe-based sensors that detect conductivity when water bridges electrical contacts or cable-style sensors that can cover larger linear areas, triggering immediate alarms, shutting off water supply valves via relay outputs, or sending notifications to property managers or homeowners to prevent extensive water damage, mold growth, and structural issues.

The global Wired Water Leak Detectors market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
