Abstracts

A wireless 2D barcode scanner is a handheld device that captures and decodes two-dimensional barcode symbologies?such as QR codes, Data Matrix, and PDF417?without requiring a physical connection to a host system, typically using Bluetooth or Wi-Fi for data transmission. These scanners are designed for mobility and efficiency in environments where wired solutions are impractical, enabling real-time data capture and integration with inventory management, point-of-sale (POS), asset tracking, and logistics systems. Unlike traditional 1D barcode scanners, 2D models can read codes from screens, damaged or poorly printed surfaces, and store significantly more data, making them versatile for modern retail, healthcare, manufacturing, and warehouse applications where accuracy, speed, and flexibility are critical.

The global Wireless 2D Barcode Scanner market size was estimated at USD 230.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
