Abstracts

A wireless bridge is a type of networking hardware device that enables the connection of two different local area network (LAN) segments by bridging a wireless connection between them. It works much like a wired network bridge and is used to connect LANs that are logically separated and/or located in different physical locations. These networks can be in the same building but are normally in either adjacent buildings or with the proper antennas and line of sight bridges can even connect networks up to 30 miles apart. Wireless bridges connect to the wired network through the 802.11n port and replicate that data to a remote network bridge or access point via 802.11a/b/g wireless (Wi-Fi) protocol. Global Wireless Bridge key players include Ubiquiti, EnGenius, TP-LINK, Amped Wireless, ZKAccess, etc. Global top five manufacturers hold a share about 50%. North America is the largest market, with a share over 40%, followed by Europe and China, both have a share about 45 percent. In terms of product, 802.11ac is the largest segment, with a share over 95%. And in terms of application, the largest application is Office, followed by Education.

The global Wireless Bridge market size was estimated at USD 2531.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
