Abstracts

Wireless Charging Solutions for Consumer Electronics refer to the system-level and component-level technologies enabling contactless energy transfer for smartphones, smart wearables, TWS earbuds, tablets, and compact household electronics. The solutions typically adopt inductive charging, magnetic resonance, or RF-based wireless power transfer architectures. Core elements include the transmitter (Tx) module, receiver (Rx) module, coils, magnetic materials, power management ICs, communication and control protocols (Qi, Qi2, PMA, etc.), and integrated mechanical designs optimized for end-devices. Wireless charging enhances user convenience, reduces port abrasion, improves waterproof and dustproof performance, and provides greater industrial design flexibility.With Qi2 (magnetic alignment) becoming widely adopted by major smartphone and wearable OEMs, wireless charging solutions are evolving toward higher power density, improved efficiency, reduced thermal loss, and multi-device interoperability. The supply chain spans magnetic materials, coils, and PMICs upstream; module assembly and integration at the midstream; and consumer electronics brands downstream. Wireless charging is now a strategic differentiator in device design and accelerates the transition toward port-less, seamless product form factors.

The global Wireless Charging Solutions for Consumer Electronics market size was estimated at USD 51000.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during the forecast period.
