A wireless electrocardiograph (ECG or EKG) is a portable medical device that records the electrical activity of the heart and transmits this data wirelessly via Bluetooth, Wi-Fi, or cellular networks to healthcare providers, electronic health record systems, or cloud-based platforms for real-time or remote analysis. Unlike traditional wired ECG machines, these devices prioritize mobility, user-friendliness, and connectivity, enabling applications in ambulatory monitoring, telemedicine, and home-based cardiac care. They range from single-lead consumer wearables, such as smartwatches with ECG functionality, to multi-lead clinical-grade systems used by medical professionals for diagnostic purposes. Key features often include extended battery life, compact design, and integration with mobile applications or clinical software, allowing for continuous monitoring outside conventional clinical settings.

The global Wireless Electrocardiograph market size was estimated at USD 1250.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
