Report Overview

Wireless endoscopes are portable, handheld medical or industrial inspection devices equipped with a miniature camera and wireless transmission capabilities, allowing real-time visualization of internal structures or hard-to-reach areas without the need for cumbersome wired connections. These devices typically feature flexible or rigid probes, LED illumination, and connectivity options such as Wi-Fi or Bluetooth, enabling seamless integration with smartphones, tablets, or dedicated monitors for live imaging and recording. In medical applications, wireless endoscopes are used for minimally invasive diagnostics in ENT, urology, and gastroenterology, while industrial applications include pipeline inspections, machinery maintenance, and automotive diagnostics.
