## Abstracts

Wireless Energy Transmission (WET) Solutions is the transmission of electrical energy without wires as a physical link. In a wireless power transmission system, a transmitter device, driven by electric power from a power source, generates a time-varying electromagnetic field, which transmits power across space to a receiver device, which extracts power from the field and supplies it to an electrical load. The technology of wireless power transmission can eliminate the use of the wires and batteries, thus increasing the mobility, convenience, and safety of an electronic device for all users. Wireless power transfer is useful to power electrical devices where interconnecting wires are inconvenient, hazardous, or are not possible. According to the National Bureau of Statistics, in 2022, China's power generation was 8.8 trillion kWh, with a year-on-year increase of 3.7%. And the top three power generation methods were thermal power, hydropower and wind power. The per capita electricity consumption of residents was 947 kW. In 2022, China's installed power generation capacity were about 2.56 billion kilowatts, with a year-on-year increase of 7.8%. The utilization hours of power generation equipment in power plants of 6,000 kilowatts and above in the country were 3,687 hours, with a decrease of 125 hours over the same period of the previous year. The investment in power supply engineering construction of major power generation enterprises reached 720.8 billion yuan, with a year-on-year increase of 22.8%. The investment in power grid engineering construction reached 501.2 billion yuan, with a year-on-year increase of 2.0%. According to data released by the International Energy Agency, the global economy gradually recovered in 2022. With the influence of the rising energy prices, the global electricity demand in 2022 was 26,776 billion kWh, which increased 1.9% year-on-year. The generating capacity was 28,642 billion kWh, with the increase of 1.8% year-on-year. Among them, the United States generated 42.4 billion kWh of electricity in 2022, and Japan's total electricity consumption was 989.2 billion kWh, with the 7782 kWh per capita.

The global Wireless Energy Transmission (WET) Solutions market size was estimated at USD 3029.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.80% during the forecast period.
