Abstracts

A wireless flat panel detector (FPD) is a digital X-ray imaging device that utilizes an array of thin-film transistors (TFTs) and photodiodes to capture and convert X-ray photons into electronic signals, which are then wirelessly transmitted to a computer or display system for image processing, review, and storage. These detectors are characterized by their portability, absence of cables, and high image resolution, making them suitable for a range of medical, dental, veterinary, and industrial imaging applications where mobility, workflow efficiency, and rapid image acquisition are prioritized. Unlike traditional computed radiography (CR) systems or tethered digital detectors, wireless FPDs offer enhanced flexibility in positioning and can be easily integrated into dynamic environments such as operating rooms, emergency departments, or field inspections.

The global Wireless Flat Panel Detector market size was estimated at USD 1600.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
